

### Activity Sheet 3 (collaborative work)

#### Group Members:

Razo, Frederick

Ramos, Jericho

Punzalan, Jella

Pagkaliwangan, John Mark

**Create an advocacy campaign by making a poster that talks about the effect of CLIMATE CHANGE on the transmission of COVID 19 and how the community will help mitigate the hazards caused by climate change. Written explanation should be indicated along with poster. (You need to make research, relate climate change with COVID 19.)**

## **EXPLANATION:**

The COVID-19 pandemic has served as a wake-up signal for more aggressive responses to major disasters. This need has been emphasized by what has been described as the collision of this epidemic with a succession of recent extreme weather events, providing a terrifying insight into the magnitude of the looming issues as the effects of climate change grow more pervasive and pronounced. Perhaps unsurprisingly, there is substantial evidence that some of the same human activities that contribute to climate change are also driving to the genesis and growth of new diseases. Climate change is shaping the evolution of creatures in ways that lead to diseases in humans, according to scientific analysis.

Some other dramatic responses to Coronavirus have resulted in sharp decreases in economic activity and associated fossil fuel consumption all over the world. As a result, many countries are broadcasting a significant reduction in greenhouse gas emissions for 2020, bringing them one step closer to conference the initial emissions targets set by the Paris Agreement on climate change.
